RDOWEB

Cloud-based software designed for companies that wish to optimize processes and manage construction projects through field reports, which are collected and converted into a standardized workflow.

App RDOWEB

RDOWEB is also available for download in mobile devices.

Use the QRCode below to download:

DISPONÍVEL NO Google Play

Platform Features

3

CONDITIONS

- Rainfall (actual and historical average)
- Wind, humidity, temperature
- Integration with digital weather stations

OCCURRENCES

- Records of relevant events from the construction site
- Replies, comments, and notifications

2

1

TASKS

- Schedule or WBS
- S-Curve, production, quantitative and cost balance

4

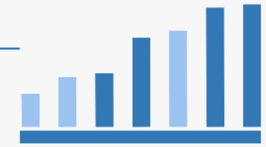

WORKFORCE

Productivity in graphical or tabular mode, workforce control by person, role, team, etc.

7

EQUIPMENT

- NR12 equipment inventory
- Field report control
- Appropriations and histograms

APPROVAL WORKFLOW

- Controlled information flow
- Paperless daily reports with digital certificates

5

WEATHER CONDITIONS

Rainfall, legal reasons, impassable terrain, strikes, requests from owners - management companies - neighbors, etc.

6

SUBCONTRACTORS

Records of all companies involved in projects, workforce and equipment segmentation by company

ACCIDENTS

- Accident records in compliance with 1.094 CONFEA Standard
- Absence and return calculation

8

Workforce

Control presence and absenteeism, cross workforce with activities of each day, track team produtivity, get automatic hourly labor reports and control the subcontractors' headcount.

Activities & Tasks

Import schedules, Unit Price (PU) spreadsheets, or Work Breakdown Structure (WBS) into RDOWEB.
Field entries will be made based on this information, allowing for the integration of planned versus actual work in a standardized manner.

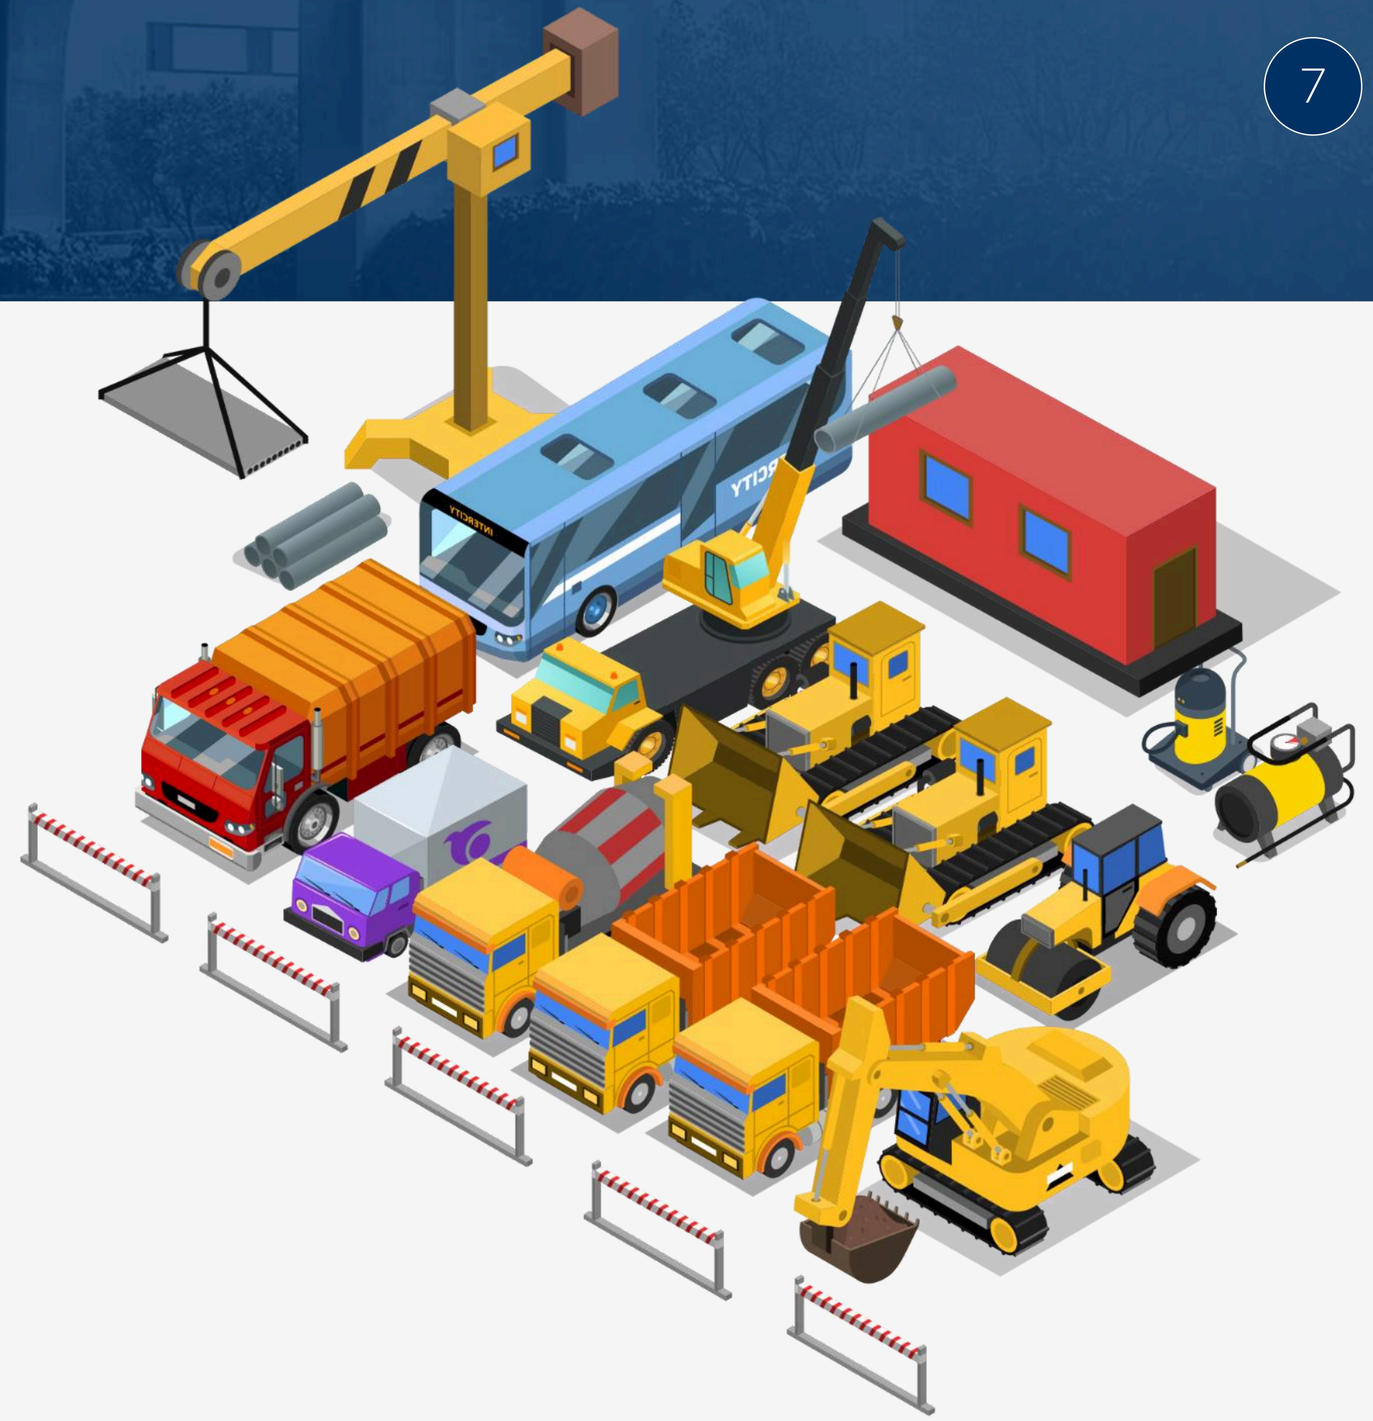

Now you will be able to reliably monitor the productive activities carried out. Get progress information and make decisions based on standardized information, with a single mouse click.

Equipament

RDOWEB records equipment usage in CDRs from field entries. It prevents duplicates and controls mobilization and demobilization. Now you have a quick and easy way to keep track of your own equipment and equipment leased by construction sites and subcontractors.

- Histograms
- NR12 Inventory
- Quantitative reports and usage hours
- Fuel control

Ocurrence

The platform creates a standardized information flow across the constructino site, management companies and owners, controlling replies & re-replies, photos and digitized files.

Searches by keywords - subjects - categories - pending issues; locate comments, replies and events that impacted the project; track deviations and anticipate necessary actions.

Shutdown

Record the events that disrupt normal working conditions, such as weather factors, material shortages, equipment breakdown, force majeure, lack of documentation or requests from third parties.

The platform cross-references the recorded disruptions with labor, activities, and equipment, generating reports to measure the impact on production, finances, or deadlines.

Weather

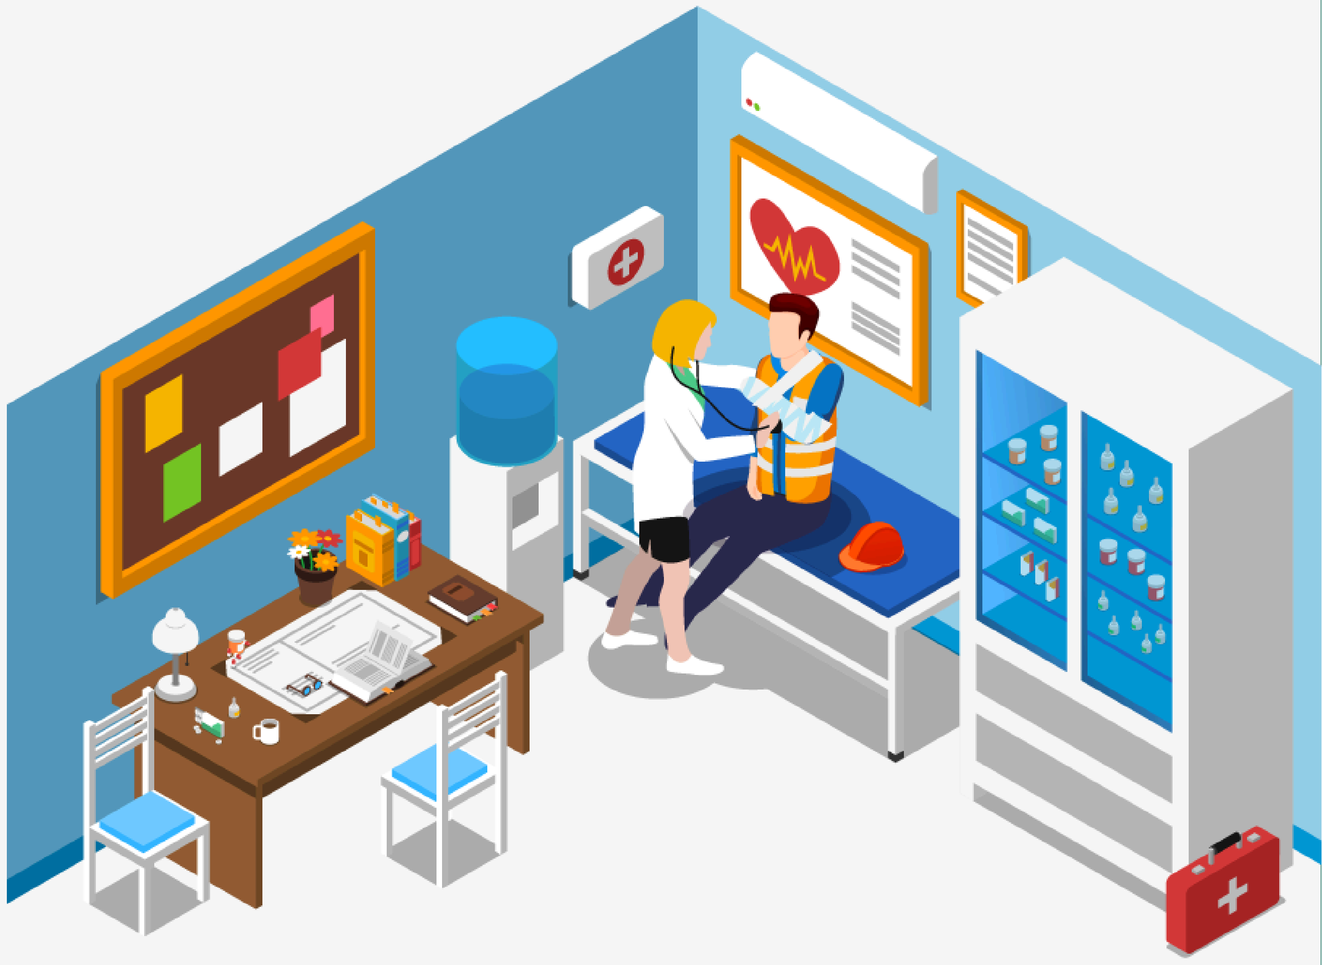

In addition to daily rainfall measurements, the platform is capable of recording various climate factors such as wind speed, humidity, and temperature.

The data is collected semi-automatically via weather stations on the construction site or from websites such as INMET or INPE.

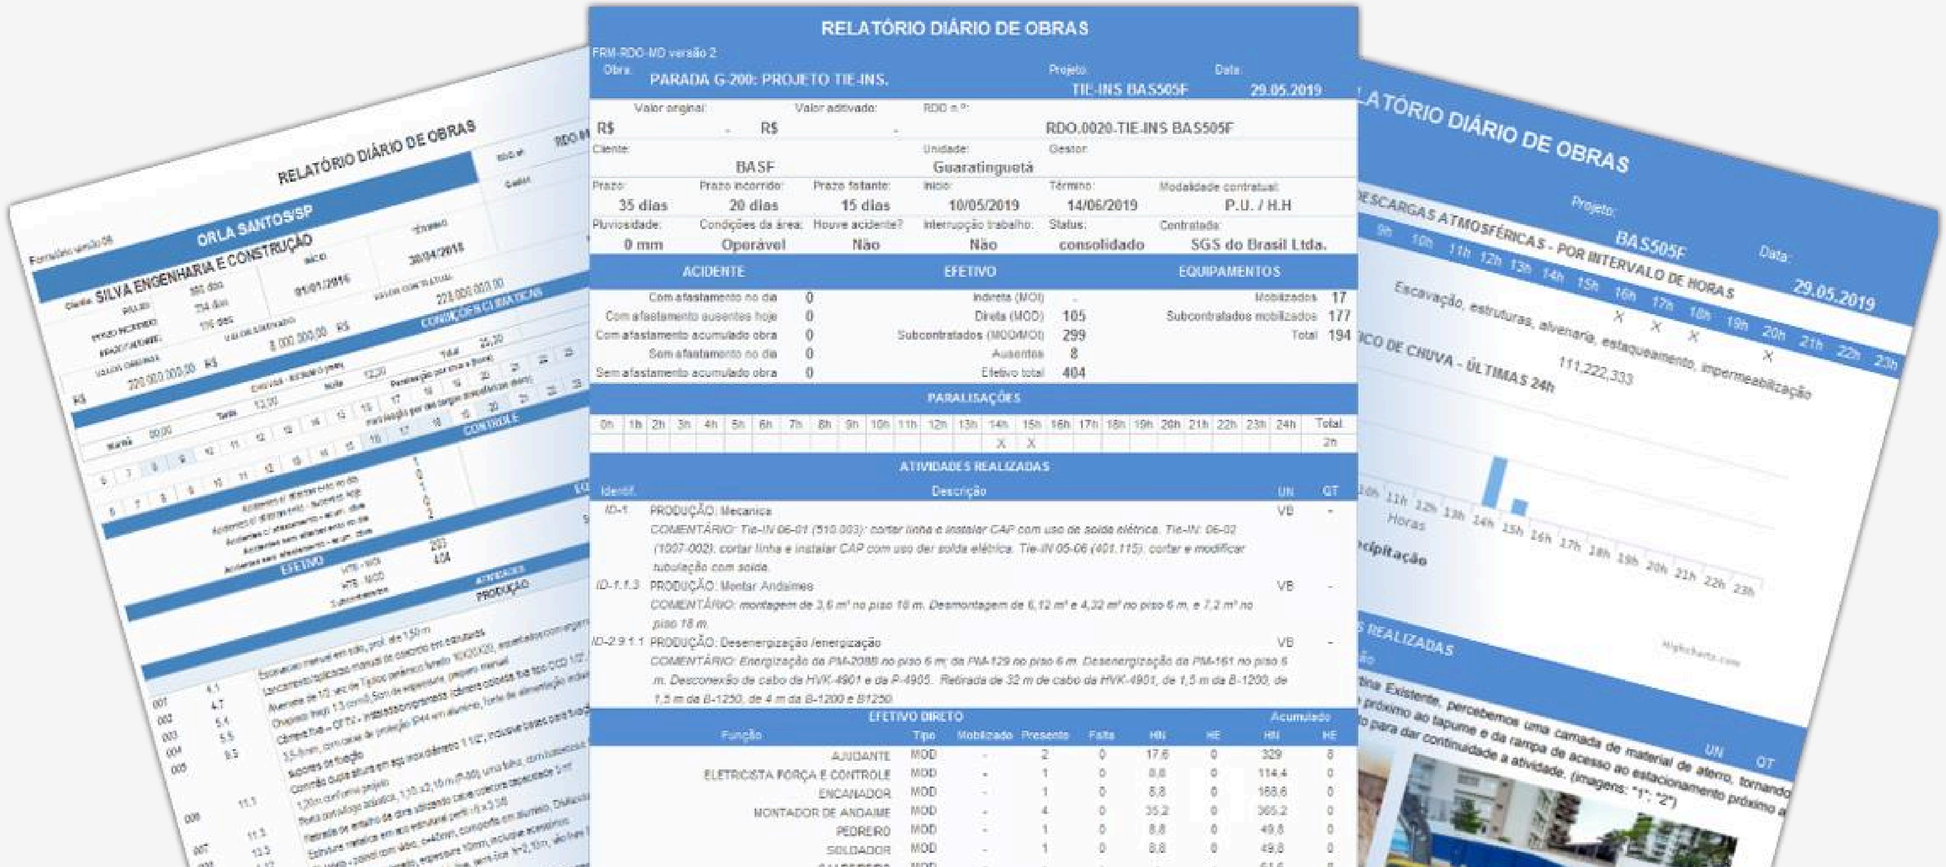

Accidents

The platform records accidents, both with or without time off work, in order to compile a set of metrics. It accepts descriptions and links files & photos, such as Work Accident Report (CAT), cause-and-effect reports, and applicable measures. The software tracks employee absences, monthly totals, and cumulative quantities.

Printing Forms

Three options of printing for the Construction Daily Report/CDR, in accordance to the CREA/CONFEA standards.

RELATÓRIO DIÁRIO DE OBRAS

FRM-RDO-MD versão 2

Obra: PARADA G-200: PROJETO TIE-INS. | Projeto: TIE-INS BAS505F | Data: 29.05.2019

Valor original: R$ - | Valor aditivado: R$ - | RDO n.º: RDO.0020.TIE-INS BAS505F

Cliente: BASF | Unidade: Guaratinguetá | Gestor:

Prazo: 35 dias | Prazo incorrido: 20 dias | Prazo faltante: 15 dias | Início: 10/05/2019 | Término: 14/06/2019 | Modalidade contratual: P.U. / H.H

Pluviosidade: 0 mm | Condições da área: Operável | Houve acidente?: Não | Interrupção trabalho: Não | Status: consolidado | Contratada: SGS do Brasil Ltda.

Dashboard

The platform generates a Dashboard using data from field notes at the construction site, presented in the form of charts and tables.

Monitor the status of each construction project in real time with reliable information organized in a standardized workflow.

Key Differentiators

Flexible license

Pay for each construction project using the software. You decide the investment value according to your company's profile.

Friendly and Easy to use

The RDOWEB learning curve is shallow, with intuitive and easy-to-use screens.

Real tecnical suport

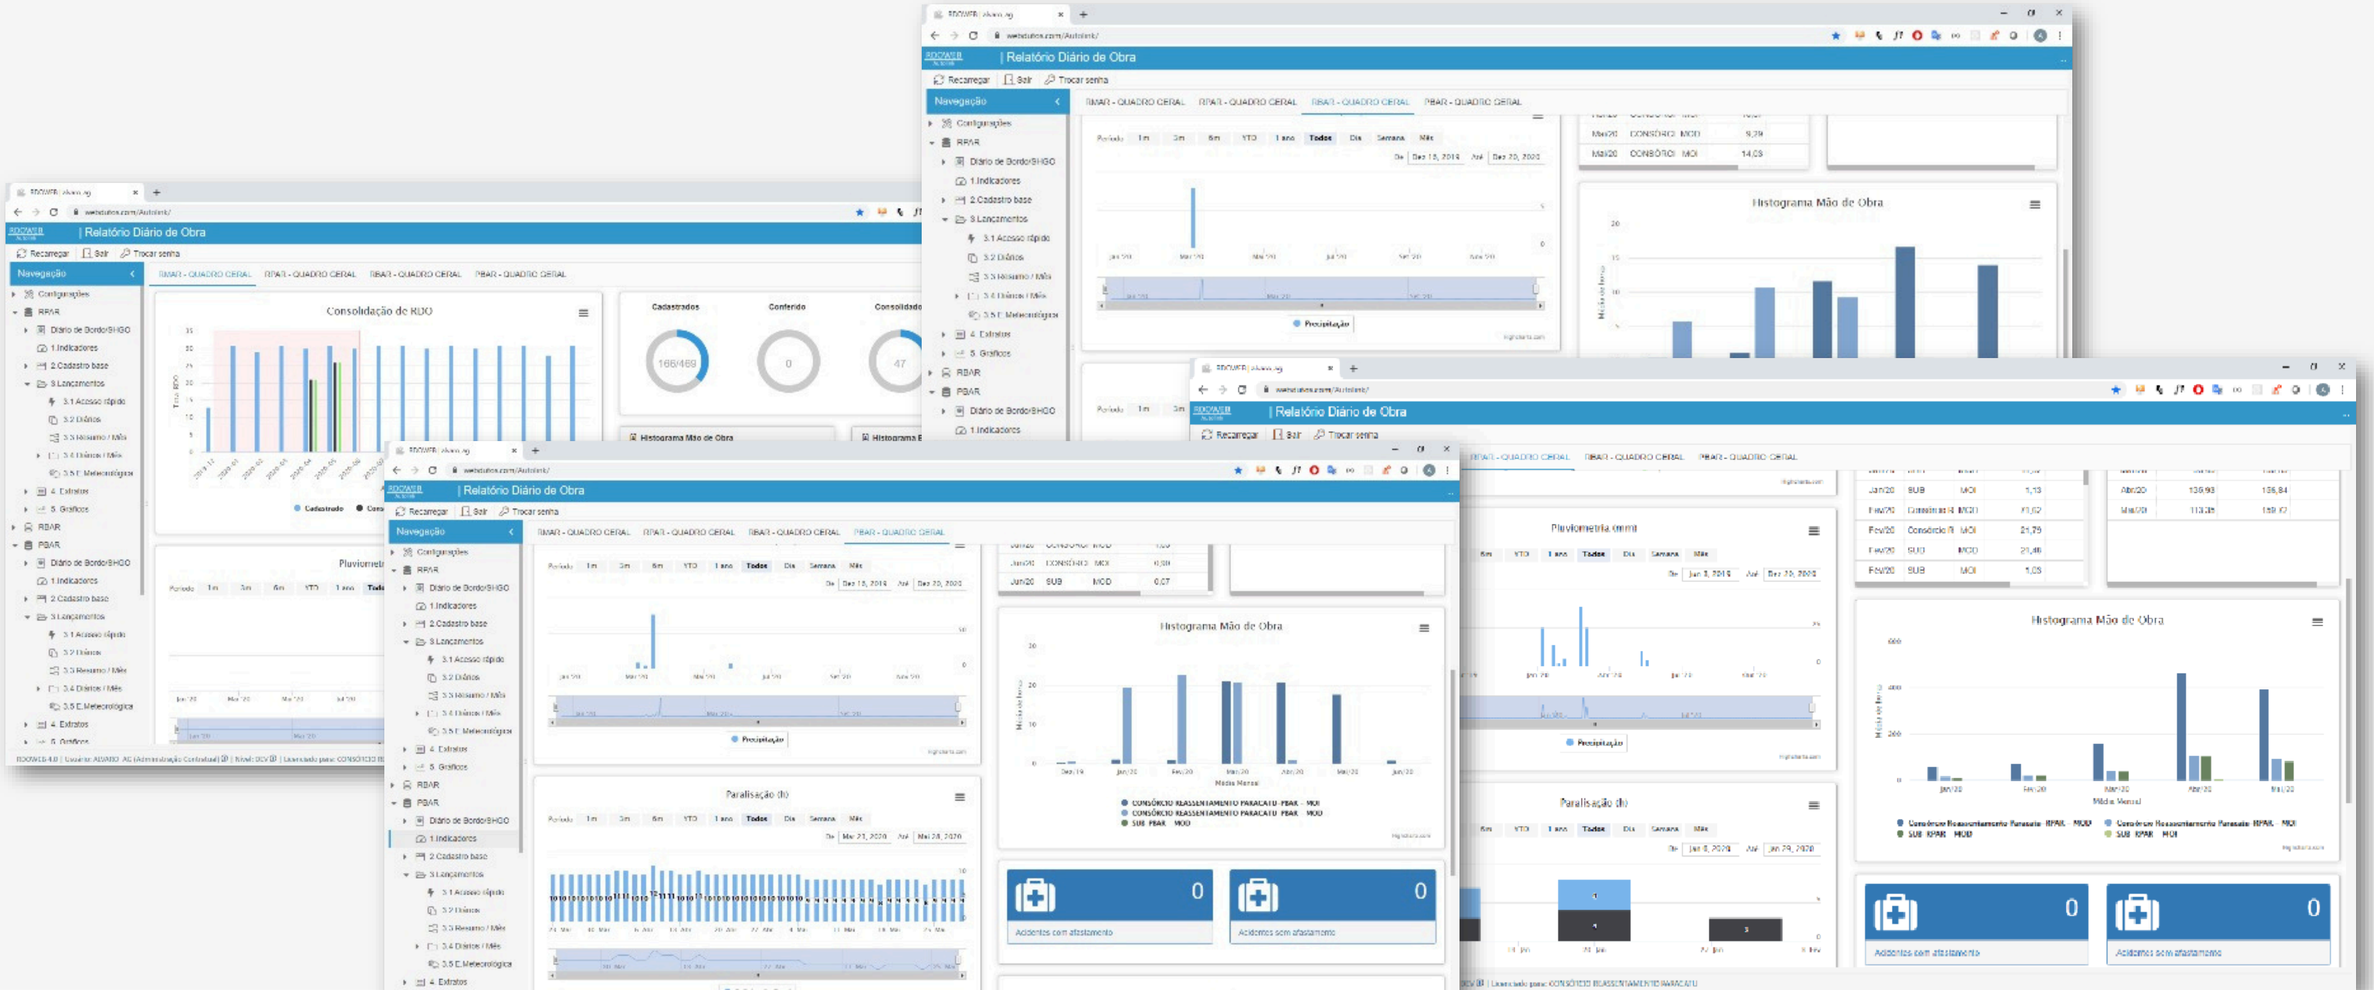

Contact us by phone or chat, download operating manuals, submit support tickets via email, share your screen, and get answers to your questions from our technical support team, with no additional costs.

Access via browser

The platform does not require you to install any additional programs.
Use a simple web browser of your choice.

Multi-project Oversight

The platform allows the multiprojects oversight.

About Webdutos

Webdutos is a company specializing in software for engineering businesses, offering solutions designed to support construction project management across various sectors, including pipeline construction, infrastructure, industrial assembly, and civil construction.

Our software is flexible and modularized, operating together or as separate components, and they can be accessed through a simple web browser, reducing your business' IT costs and providing management-level access to stakeholders who need to make quick decisions.

Robust, simple, and elegant software, along with top-notch services. We have been operating for 12 years now, providing services for large, medium, and small-scale enterprises.
